Logitech presents the Slim Folio-- a Bluetooth keyboard-case combo designed for the 5th generation 9.7-inch iPad, with a battery the company claims lasts up to 4 years on 2 hours of daily use.

The keyboard has a comfortable laptop-style layout with "large, well-spaced keys" that are "stretched from edge-to-edge." It includes dedicated function and iOS shortcut keys for switching between apps, summoning the search function, Home screen access and volume control without need to touch the iPad display.

Connectivity comes through Bluetooth LE, and the keyboard automatically activates when placed in typing position. It runs on replaceable coin cell batteries able to last up to 4 years, with no need for replacements.

Meanwhile the case is folio style, and locks into place for an ideal typing and viewing agnle. It is slim and light, and protects the tablet from scratches and bumps through a stain-resistant fabric designed by the luggage industry.

The Slim Folio iPad case is available now.
