

Vuzix V720 Video Headphone Win CES Awards

Written by Bob Snyder
26 January 2014

Vuzix's V720 video headphone wins two 2014 CES Innovations Design and Engineering Awards in the "Headphones" and "Wireless Handset Accessories" Product Categories.

This is the 10th consecutive year Vuzix has won a CES Innovation award and increases the total to 16 awards received over that time, including "Best of Innovation" last year for the highly-acclaimed M100 Smart Glasses.

The V720 are high-performance headphones with HD video screens that provide a huge fold-up 720p display to immerse the viewer in a video experience that is "like watching an IMAX movie."

Ideal for games or movies which require great audio, the V720 can even be used as a desktop display replacement. The V720 video headphones connect to PCs, mobile phones, tablets and game consoles and provide support for 3D HDMI content.
