

16.8m Colours in Excalibur RGB Keyboard

Written by Marco Attard
06 November 2014

The Tesoro Excalibur RGB (G7NFL) is a gaming keyboard featuring mechanical keys and LED backlighting providing a palette of 16.8 million colours, with different lighting modes and 4 levels of LED backlight dimming.

Users can set the illumination to modes such as "breathing", "colour mode" and 2 gaming modes where only game-relevant keys are lit up.

It also features Full N-Key Rollover (NKRO) for full anti-ghosting functionality or USB NKRO, with a 1000Hz polling rate ensuring no keystroke is missed. Meanwhile 512KB of onboard memory allow users to record macros without need for external software, and each key is fully programmable. Tesoro says the keyboard stores 5 sets of profiles, 300 macro keys and 2000 macro key presses per profile.

As for the actual keys Tesoro describes the mechanical switches as "gaming grade," being engineered for 60 million key strokes and complete with an anti-slip rubberised foot design.

The Excalibur RGB keyboard will be available from December 2014.
