

Logitech Intros Keys-to-Go

Written by Marco Attard
12 November 2014

Logitech launches the Keys-To-Go-- a standalone portable Bluetooth keyboard for use with the all iPad generations, with keys offering tactile feedback even while fused into a water-repellant FabricSkin covering.

It is 6.1mm thick, weighs 180g and carries a rechargeable keyboard promising up to 3 months of use on a single charge.

Logitech also announces upgrades to its current keyboard-equipped iPad case lineups-- meaning the Type+ and Ultrathin cases are now compatible with the iPad Air 2.

“People use their iPads everywhere and the Logitech Keys-To-Go was specifically designed to effortlessly support people’s active lifestyles,” the company says. “We have introduced the Logitech Keys-To-Go and updated our existing award-winning lineup of iPad keyboards for the new iPad Air 2 to offer a suite of products that perfectly complement the mobility of the iPad. So, whether you’re a mother or father taking your iPad from the kids to type a quick note, or a traveling executive catching up on email, you can have easy access to typing when you need to say more.”

The Keys-To-Go is available in European markets from November 2014 in either black, red or teal.
