07 January 2015

Griffin Technology releases four mobile device charging accessories at CES 2015-- the PowerDock Pro 5-slot charging slot, the 3-port PowerBlock 3 wall charger, the PowerBlock Wall Dock and the 12V PowerJolt Premium car charger.

The PowerDock Pro features 5 slots and ports for customers to store and charge multiple devices from a single power source, with 12W of power and what Griffin calls "ChargeSensor" circuitry to optimise charging for each device. The charging slots carry devices without need for removing from cases, and a built-in cord management system complete with hidden compartment takes care of cables.

Meanwhile the PowerBlock 3 charges up to 3 devices with 10W ports. It also features ChargeSensor technology within as a space-saving design. Another wall charger from Griffin is the PowerBlock Wall Dock, a means for propping up devices as they charge on a wall. It features 12W of charging power and a detachable 1.2m Lightning cable.

The final Griffin charging accessory at CES 2015 is the PowerJolt Premium, a 12V car charger complete with a 1.2m cable covered in a tangle-proof braided nylon jacket. It also includes a Lightning connected in a durable aluminium housing, and is also available in a detachable power cable version.

All the above mentioned Griffin products should hit the market on Q3 2015.
