Kensington launches the KeyFolio Thin X3 Plus for iPad Air 2 at CES 2015-- an upgraded version of the KeyFolio iPad case featuring a 4500mAh battery and a companion PowerLift power management app.

According to the company the battery can charge an iPhone 2-3 times, as charges an iPad by up to 50%. The case also features an integrated Bluetooth keyboard with 6 rows of high-performance scissor keys within a form-fitting hard shell complete with aluminium accents.

The keyboard automatically switches on and off when engaged or disengaged from the magnetic stand, while a "QuickFold" design allows easy transition between typing and viewing modes.

Charging takes place via USB.

"Today's iPad and iPhone users don't want to risk running out of battery life. They want to know that they have the power they need to get the job done, regardless of where they are," Kensington says. "With the new KeyFolio Thin X3 Plus, we're taking power to the next level while also giving users the high-performance keyboard they want to be more productive. It's the perfect mix of function, style and efficiency."
