 09 November 2015

Accessory maker Satechi presents a USB Type-C hub solution for the 12-inch Retina MacBook-- the Type-C Hub Adapter, a means to add a three USB 3.0 Type-a ports, Micro SD card slot and SD cards slot.

The adapter sits flush with the MacBook, and fits easily in a purse, backpack or laptop bag. It requires no driver installation, and is available in colours matching the Retina Macbook, namely gunmetal, silver and gold.

However users have to keep in mind the adapter lacks a second USB-C port for passthrough charging, meaning the MacBook will not charge through the USB-C connector once the hub is in place.

The Satechi Type-C Hub Adapter is available now.
