Customers wanting to move their PC and related gear around might be interested in the Asus ROG Ranger, a backpack promising a durable means for doing so.

According to the company the backpack is made from water-resistant 1260D Gucci polyester, and can resist any wear and tear. Adding further "tough protection" is a built-in polyurethane cover one can put over the backpack in case of rain. When done the cover simply folds up and tucks back into a zipper at the base of the pack.

The pack appears to fit quite a lot of gear-- Asus says it can carry two 17-inch laptops, or one 17-inch laptop together with a mouse, headset, full-size keyboard phone and more. A foldable closure system provides extra capacity and a wide opening for easy loading and unloading, a detachable accessories panel and removable side pocket makes for better organisation and an integrated lock provides at least some security.

The Ranger backpack is available now.
