

Logitech Presents K780 Multi-Device Keyboard

Written by Marco Attard
15 September 2016

Logitech announces a desktop keyboard for customers juggling between multiple devices-- the K780, a wireless number with "Easy-Switch" buttons allowing one to easily switch between 3 connected devices.

The keyboard is compatible with Windows, Mac, iOS and Android, and features a full keyboard layout complete with 10-key number pad. An integrated slot with rubber finishings can hold devices ranging from smartphones to the 12-inch iPad Pro at an ideal reading angle.

The 3 Easy-Switch buttons double as the F1-F3 keys via modifier, and have an LED allowing one to check which device the keyboard is currently connected to. Other keys provide useful functions such as Home, Search, Back, App-Switch and Contextual Menus.

Connectivity comes through either USB or Bluetooth Smart, with connection range reaching around 10m. The combination of on/off switch and power-saving idle mode promises battery life reaching up to 24 months through pre-installed AAA batteries.

The K780 keyboard is shipping now.
