

Xiaomi Presents Anodised Aluminium Mi Mouse

Written by Marco Attard
10 November 2016

Chinese vendor Xiaomi continues moving into the PC market with the announcement of a mouse-- the Mi Mouse, a dual-mode connection wireless rodent featuring anodised aluminium and ABS construction.

The Mi Mouse has a minimalist design reminiscent of Apple products, with 2 buttons and a scroll wheel in a configuration suitable for both left and right handed users. It is also fairly small, measuring 11.02 x 5.72 x 2.36cm, and inside is a 12000dpi Pixart 3610 sensor able to work on many surfaces, including paper, cloth, "ground glass" and, of course, regular mouse pads.

Connectivity comes through Bluetooth or included 2.4G wireless adapter, while a pair of standard AAA batteries provide power.

The Mi Mouse ships by end November 2016.
