PC accessory maker Corsair takes on furniture with the T1 Race-- a gaming chair with a design reminiscent of racing chairs, as is typical of gaming chairs of its ilk.

The T1 Race is covered in polyurethane (aka synthetic) leather, with PU leather pillows adding neck and lumbar support. The arm rests can be raised, lowered, shifted and swiveled, while the seat tilts by up to 10 degrees and reclines completely, meaning one can sleep in it.

Of course, the seat also has nylon caster wheels, and the seat sides and armrests come complete with carbon fibre-esque embellishments.

The Corsair T1 Race is available now in black, blue, red, yellow or white.
