The next company to take on the Thunderbolt 3 docks is Kensington-- the SD5000T Thunderbolt 3 Docking Station is similar to other options on the market, with a variety of ports and 85W charging power.

The SD5000T has a horizontal design, and offers dual Thunderbolt 3 ports for pass-through connections, DisplayPort, separate audio/out ports and a gigabit ethernet port. Also included are x1 USB-C (with 15W power) and x1 USB-A (with 2.1 amps fast charging) ports. The combination of DisplayPort and Thunderbolt 3 allows support for up to two 4K external displays.

This being a Kensington product, the SD5000T features the company's trademark lock slot for use with a security cable. Such a feature makes it more attractive to enterprise customers wanting to secure peripherals around the office. Another interesting feature is "Zero Footprint Mounting" through mount accessory (sold separately) allowing one to attach the dock to the back of VESA-compatible displays.

The SD5000T is available now.
