

Sonnet Intros Thunderbolt 3 to Dual HDMI Adapter

Written by Marco Attard
25 October 2017

Sonnet Technologies launches the Thunderbolt 3 to Dual HDMI 2.0 Adapter-- a means for customers to connect up to two 4K displays or one 5K displays to their Windows PC or Mac.

The accessory connects to PCs, such as the 2016 MacBook, via Thunderbolt 3. It is plug-and-play, and provides a pair of HDMI ports for the connection of monitors. The computer powers the adapter, meaning no external power supply is required, and native macOS and Windows support allows use without installation of separate driver software.

It supports two monitors up to 3840 x 2160 resolution with 60Hz refresh rates, and also plays nice with lower resolution (such as 1920 x 1080 or 1920 x 1200) displays. Audio support is also included.

The Sonnet Thunderbolt 3 to Dual HDMI 2.0 Adapter is available now.
