The Elgato Thunderbolt 3 dock range gets an addition at CES 2018-- the Thunderbolt 3 Mini Dock, featuring HDMI, DisplayPort, USB 3.0 and ethernet ports with up to 40Gb/s throughput.

A built-in Thunderbolt 3 cable powers the Mini Dock. This can be tucked away, making the dock easy to carry around.

"Thunderbolt 3 is the only standard that offers full performance and stability when simultaneously running 4K video and high bandwidth data signals over a single port," the company says. "With Elgato Thunderbolt 3 Mini Dock, building sure-fire setups becomes possible whenever and wherever you work."

The Mini Dock should start shipping on Q2 2018.
