

Next Bluetooth Devices Will Rock

Written by Bob Snyder
08 July 2010

Bluetooth SIG formally adopts the full spec for Bluetooth low energy that will create a new ecosystem of innovative products and apps that will change the way we think about the things around us.

Bluetooth low energy is not just a variant of the existing Bluetooth spec: it's an entirely new standard optimised for low power and internet connectivity. It marks a change in short range wireless, providing a new short range connection for a new decade.

Anything that we touch or use can employ Bluetooth low energy to send its data to the net. Think fitness devices, personal healthcare, watches and more...
