

A Switch Controller With a Headphone Jack

Written by Alice Marshall

Customers with a penchant to play Fortnite on the Nintendo Switch get an easier option for voice chat-- the FaceOff Deluxe+ Audio Wired Controller from PDP.

Using voice chat on the Switch is perhaps a bit of a hassle, since it involves connection through a separate Switch Online smartphone app. The Faceoff Deluxe+ controller, on the other hand, simply requires plugging a headset in a built-in 3.5mm jack. The feature uses the audio SDK developed by Vivox, the same company behind the in-game chat in Fortnite.

In terms of design the FaceOff Deluxe+ is near identical to the Switch Pro Controller, if with the addition of on-board audio controls allowing one to adjust audio through the controller. It also includes a pair of programmable paddle-style buttons on the back and an interchangeable faceplate for further customisation.

The FaceOff Deluxe+ is available on Q3 2019.
