

100 Hour Battery Life for Sennheiser GSP 370 Headset

Written by Frederick Douglas

Sennheiser claims the GSP 370 wireless gaming headset is the first to feature 100 hours of battery life, the result of both low power consumption and, of course, a long-lasting battery.

In fact, the company says a customer using the headset for 6 hours per week only needs to charge the GSP 370 once every 4 months, and since it can be used while recharging no gaming time gets interrupted. The headset is PC, Macs and PS4 compatible, and promises audio with near-zero delay as well as Sennheiser audio quality. The microphone features noise canceling, and users can mute it by simply lifting the boom arm.

The design of the headset is very similar to previous Sennheiser GSP 300 series headsets, with a split, padded headband and memory foam ear cushions. Ball-joint hinges connect the ear cups, allowing for adjustments to fit the user properly. An included micro USB cable takes care of charging.
