Netgear broadens its wifi range extender series further by launching the WN2500RP-- now boosting coverage of both 2.4 and 5GHz wifi signals simultaneously.

It supports wireless 802.11 a/b/g/n standards (making it compatible with virtually all wireless networks), using FastLane technology to enable customers to maximise bandwidth for video streaming and online gaming.

In addition it also supports up to x4 wired to wifi connections, providing ethernet-enabled devices with wifi connectivity.
