New wireless solutions were previewed to visitors at ISE in Amsterdam as Peerless-AV announced the formation of the Peerless-AV Technology Division dedicated to advanced digital content delivery solutions for the commercial and residential markets.

The new division will focus on the company's technology portfolio, to cover new areas such as **wireless connectivity, wireless broadcast, digital audio** and **touch products**, to provide a comprehensive catalogue of **digital content delivery tools** for AV dealers, distributors, integrators and installers.

A selection of these new products was shown by Peerless-AV for the first time in Europe at ISE last week. This included the **HD Flow Pro Wireless Multimedia Kit**, a device allowing Full HD 1080p video and passive 3D signals to be streamed up to 40m to HDTVs, projectors or other displays without cabling and the **PeerAir Wireless HD Multimedia System**, an HDMI interface-based plug-and-play wireless content streaming system for home entertainment, corporate, education and training applications.
