Netgear adds to its 802.11ac wireless product family with the R6100, a dual-band wifi router supporting combined speeds of up to 1200Mbps together with ethernet wired connections.

Using the 802.11ac standard the R6100 supports both new and legacy devices with dual 2.4GHz and 5GHz a/b/g antenna.

The router also features a number of extras, including the genie iOS/Android smartphone network managment app, AirPrint support, DLNA compatibility and guest network access.

Security is turned on out-of-the-box, while installation is supposed to be fairly simple.
