StarTech launches the Wireless-N Travel Router (R150WN1X1T)-- a small, portable router allowing customers to easily connect wireless-only devices to wired networks.

Ideal for customers wanting 802.11b/g/n connectivity in hotel rooms, conference centres or boardrooms, the portable router fits over iPad wall chargers and includes a pass-through USB port to charge devices while in use.

The package also includes an extension USB cable.

Multiple device connections are supported (sidestepping the wifi lock-in to a single device found in some hotel room), and the device can also extend coverage of existing wireless networks.
