Netgear launches the latest member of its Stealth Fighter-esque Nighthawk router range at IFA 2014-- the Nighthawk X4 AC2350 (R7500), claiming to push the fastest dual-band 802.11ac wifi via Quad-Stream wifi architecture.

It carries a 1.4GHz dual-core processor and the Quantenna 802.11ac Wave 2, 4x4 MU-MIMO (Multi-User MIMO) wifi solution, and reaches combined network speeds of up to 2.33Gbps (up to 1733Mbps on the 5.0GHz band + 600Mbps on the 2.4GHz band).

Meanwhile Dynamic QoS prioritisation recognises individual applications (such as gaming, video streams or file transfers) and allocates bandwidth accordingly. The company says the X4 is also device-aware to further ensure lag-free online games and jitter-free HD video streams.

Further connectivity comes through x2 USB 3.0 ports and x1 eSATA port. Also included is ReadySHAre vault, an application handling automatic PC backups.

The Nighthawk X4 AC350 is available now.
