Customers wanting a simple means to extend the range of home wifi can find an ideal solution with the Devolo Wifi Repeater ac, a device the company says provides transfer rates reaching up to 1200Mbit/s.

The repeater uses both 2.4 and 5GHz wireless networking bands to allow for more flexibility in automatic channel selection, as well as faster combined networking speeds. It also includes an integrated LAN port for the wired connection of another device, such as a smart TV, PC, game console, STB or NAS drive.

Setup promises to be easy enough via either WPS, PC, tablet or smartphone, and Devolo even offers a free Wi Help app for Android device users. A compact design allows for versatile positioning anywhere in the home.

The Wifi Repeater ac is available now.
