

Devolo AG shows off its powerline-based offerings at CeBIT 2011-- including its new dLAN 500 series, the dLAN 200 AV USB extender and the dLAN Cockpit home network management software.

The dLAN 500 range has a transmission rate of 500 Mbps, fast enough to carry services such as broadband, 3D IPTV and VoIP. It is IEEE 1901-based, and thus compatible with all corresponding standardised powerline adapters (including the company's earlier dLAN 200 products) and carries TR069 support for remote management.

Products include the AVmini (coming in a compact packaging) and the AVplus (with integrated power outlet and mains filter).

Meanwhile the dLAN 200 AV USB extender allows sharing of USB HDDs and printers over a powerline network. For powerline network management, Devolo offers Cockpit-- not simply a status monitor, it allows users to all their network's adapters' connection speeds.
