IFA 2017 has Acer launch a pair of 360-degree LTE-connected cameras-- the Holo360 and the Vision360, with the former aimed at general use and the latter being an in-car dash cam.

The Holo360 is the size and shape of a smartphone, and uses a Qualcomm Snapdragon 625 processor to stitch 4K resolution 360-degree videos. It features a 3-inch touchscreen and runs on Android 7.1, making it easy to share videos without need for connection to a smartphone or PC.

Meanwhile Vision360 is ideal for customers wanting an in-car dashcam able to capture video of an entire trip. It carries two cameras and records 4K footage complete with GPS coordinates. Recorded video gets automatically uploaded to the cloud, while built-in location tracking allows for remote viewing or a simple means to finding where the car is parked.

The Holo360 and Vision360 should be available in EMEA territories sometime in Q4 2017.
