

A Logitech Webcam for the Apple Pro Display XDR

Written by Frederick Douglas

The Apple Pro Display XDR might be as high-end as monitors come, but it does lack an integrated webcam. Enter a 3rd party solution-- the Logitech 4K Pro Magnetic Webcam specifically designed to work with the display.

The 4K Pro Magnetic Webcam attaches to the display using a specially designed stand and a magnet Logitech claims remains attached even when users rotate the display into portrait mode. It should even automatically rotate video input in case the display is rotated, meaning users can video chat no matter the orientation of the monitor.

As for specifications, the webcam offers a lens with an 82.1-degree horizontal field of view, autofocus capability and 5x digital zoom, and shoot 4K resolution video streams at up to 30fps. Improving image quality are HDR and the Logitech RedLight 3 system, while a pair of integrated microphones with noise cancellation take care of sound. Connectivity comes through USB-C cable.

While designed for the Apple Pro Display XDR, the 4K Pro Magnetic Webcam is also compatible with 2018 or later MacBook Pro models, the 2019 iMac, 2019 iMac Pro and 2018 or later 13-inch MacBooks with an eGPU. It is available for order now.
