While a multitude of non-PC devices will play a role in the connected living room of the future, that doesn't mean the PC will fade away. In fact, according to a new study from ABI Research, PCs are destined to play an ever-increasing role in the management, distribution and playback of multimedia content in the home, with both network-connected PC media servers and in-living room PCs growing in adoption over time.

Both AV form factor home theater PCs and more traditional home theater PCs will grow to an installed base worldwide of 25 million by 2013.
