GeiL borrows the Phantom Gaming brand from ASRock with the Evo Spear Phantom Gaming Edition memory-- modules designed for use in small form factor PCs, especially those featuring Phantom Gaming Z390 motherboards.

The Evo Spear Phantom Gaming memory modules come in DDR4-2400, DDR4-2666, DDR4-3000 and DDR4-3200 versions, with latencies ranging from CL17-19. The lower end modules run at voltages of 1.2V, while the higher-spec modules run at 1.35V. The kits also include an XMP 2.0 profile for one-click overclocking, and individual stick capacity reaches up to 16GB.

The modules are similar in stylings to the Phantom Gaming range, with a stealth black aluminium frame with silver branding stickers. The low profile heat spreaders are designed to minimise CPU cooler obstruction, and as such ideal for SFF PC builds.

The Evo Spear Phantom Gaming memory modules are available in kits with capacities from 4 up to 64GB for both Intel and AMD platforms.
