Golden Emperor International Ltd-- the company better known as GeIL-- announces the DDR4 3200MHz SO-DIMM 64GB kit, a x2 32GB kit with support for both Intel 10th Gen and AMD Ryzen 4000 series processors.

Aimed for customers wanting to increase the memory capacity of their laptops, the DDR4-3200 64GB kit offers CAS latencies of 22-22-22-52 in a simple black design. GeIL says all kits are tested using its DYNA 4 SLT technology, and each kit has an operating voltage of 1.2V. The series also includes DDR4-2666 and DDR4-2933 variants, with the DDR4-2666 kit offering latencies of 19-19-19-43 and the DDR4-2933 featuring latencies of 21-21-21-48.

GeIL is still to announce when the memory kits start shipping.
