

The 22-Inch Desktop Tablet

Written by Marco Attard

Is it an over-large Android tablet or an ARM based desktop? That is the question visitors ask when seeing the VCD22 Android Smart Display at the ViewSonic Computex 2012 stand.

The VCD22 looks like an all-in-one desktop, but it carries a 1GHz dual-core TI OMAP processor and runs on Android 4.0. The 22-inch touchscreen handles 1920x1080 resolution, even if it appears to suffer from low contrast and poor viewing angles.

The device aims at family or classroom use, with the Computex display model having a variety of family-aimed software. ViewSonic suggests a \$479 price tag, which seems to represent decent value.
