

HP Reveals First Android Slate

Written by Marco Attard
27 February 2013

After dropping webOS on the hands of LG, HP reveals the OS for its latest mobile device at MWC 2013-- the Slate 7 is the first Android tablet from the company.

A 7-inch low-cost (\$170) device aimed at first-time tablet consumers, the Slate 7 carries a 1024 x 600 resolution display, dual-core Cortex-A9 1.6GHz processor, 1GB RAM and 8GB internal storage inside a stainless steel frame with soft-touch backing.

It apparently also is the first tablet with embedded Beats Audio according to HP, while native printing capability comes via HP ePrint app.

The HP Slate 7 should be hitting the market in either gray or red from April 2013.
