

Acer Intros Spin 11 Chromebook

Written by Alice Marshall
25 January 2018

Acer has a Chromebook addition-- the Chromebook Spin 11, a convertible number with a 360-degree hinge, 11.6-inch touchscreen, x2 USB-C ports and Android app support.

If the Spin 11 looks familiar, that's because it, well, is. The laptop was actually first launched in the education channel last year as a convertible variant of the ruggedised Chromebook 11 N7. As such, the "new" Spin 11 is the same thing, only available via the regular retail channel.

In terms of hardware, the Spin 11 carries either a quad-core Pentium N4200, quad-core Celeron N3450 or dual-core Celeron N3350 processor, 4/8GB RAM, 32/64GB storage (expandable via microSD slot), x2 USB-C ports and a 1366 x 768 resolution IPS touchscreen. Customers can also add an optional Wacom stylus or a "world-facing" camera on the cover on top of the traditional webcam.

The Spin 11 should be available in EMEA from April 2018.
