

MSI follows on the launch of the AMD Radeon RX 5500M GPU with a laptop featuring such mobile gaming hardware-- the Alpha 15, a 15.6-inch laptop also featuring Radeon 7 3750H APU and a 144Hz 1080p IPS Radeon FreeSync display.

According to MSI, the addition of the Radeon RX 5500M allows for "triple-digit" framerates, as well as enhanced game visuals through FidelityFX technology. Further boosting performance is Cooler Boost 5, a 7-heatpipe cooling module designed to take advantage of the hardware, as well as the addition of either 8 or 16GB of RAM. Storage comes through x1 M.2 SSD and x1 2.5-inch SATA HDD.

Being a gaming laptop, the Alpha 15 has a keyboard with per-key RGB lighting, as well as enhanced audio through a "Giant Speaker" with a chamber 5x larger than typical laptops. The headphones are also improved, since they support high-resolution audio. Connectivity comes through Wifi 5, Bluetooth 5.0, ethernet port, x1 USB-C port, x3 USB-A connectors, x1 HDMI 2.0

and x1 mDP display outputs and a card reader.

The Alpha 15 ships with a choice of either *Borderlands 3* or *Tom Clancy's Ghost Recon Breakpoint* games.
