Medialine launches the i7AN-G, the latest in its line of Android-powered tablets.

This model comes in a portable 7" format, bridging the line between smartphones and tablets further by allowing users to do phone calls by using their current SIM card.

It carries a dual-core 1Ghz processor, complete with 3D hardware acceleration, while the 1024 x 600 resolution 7" screen uses IPS technology for wide viewing angles. Being a capacitive touchscreen it also handles multitouch input.

The OS is Android 2.2, with Flash 10.1 support-- soon upgradable to version 3.0.

Connections come through 3G and wifi, as well as Bluetooth. Internal storage comes in either 4, 8 or 16GB eMMC memory-- expandable through micro-SD slot to up to 32GB.

The device also includes x2 cameras (2.0M front, 3.2M back) and GPS, and is already available for ordering.
