

We've seen plenty of blinged-out CE devices-- especially iDevices, for some reason-- yet we're sure Stuart Hughes' latest takes the "most luxurious" award, until something else manages to beat it.

What makes the "Gold History Edition" iPad 2 unique is history-- or pre-history, rather. Its front frame consists of 75 million year-old Ammolite rock containing fragments from a 65 million year old T-Rex fossil thigh bone!

The device's rear is no less impressive-- with 2kg of 24 carat gold and an Apple logo formed out of 53 individually set diamonds.

Topping everything off is a home button consisting of a single cut diamond set within a platinum base containing 12 more diamonds.

There's 2 Gold History Edition iPads in existence-- each costing an affordable (ha!) £5000000. No mention of a similarly luxurious smart cover yet, though.
