

Fusion Garage Returns to Tablets

Written by Marco Attard
17 August 2011

Fusion Garage-- maker of the stillborn JooJoo tablet-- announces its return to the mobile device business with a tablet and a smartphone, the Grid 10 and Grid 4.

Powering both devices is Fusion Garage's Android-based GridOS, which the company says "reinvents touch computing from the ground up" with a completely gesture-based interface.

The Grid 10 is a 10.1" tablet carrying nVidia's Tegra 2 processor and a 1366 x 768 resolution screen. Connections come through either Bluetooth, wifi or 3G, and the device includes a built-in video calling app (via 1.3MP front-facing camera) and Fusion Garage's Grid Shop app store.

Meanwhile the Grid 4 is a 4" handset, with a Qualcomm dual-core processor, 800 x 480 touchscreen, 16GB memory and x2 cameras (0.3MP front-facing, 5MP rear-facing).

The Grid 10 should be available this September, and Fusion Garage says the Grid 4 will be out by Q4 2011.
