

The Upgradeable Kid-Proof Android Tablet

Written by Marco Attard
03 November 2011

Customers looking for a tablet children can also use without damage-related worries might find the Karuma PlayBase ideal-- a low-cost Android tablet in a kid-resistant design.

It has a 7" capacitive multitouch display, a 1.2GHz Cortex A8 processor and 1GB of DDR3 RAM, making it upgradeable to either Honeycomb or Ice Cream Sandwich Android versions.

Connectivity comes through wifi and a micro USB port.

Construction is in metal, and it comes with both a a shock-absorbent silicon cover protecting the device from the elements and a removable "PlayCover" doubling as an integrated kickstand.

PlayBase preorders will open on 15th November, before the device goes on sale on December.
