

ViewSonic Desktop Tablet Returns

Written by Marco Attard
12 September 2012

You might remember the [ViewSonic VCD22](#), the odd, oversized Android tablet (or ARM-based AIO PC, if you will) first seen at Computex 2012. It returns, and ViewSonic now calls it the VSD220 Smart Display.

It remains mostly the same to what was seen at Computex, if with one major difference-- the battery is out. Otherwise it is still 22-inch Android 4.0 AIO PC with a 1920x1080 touchscreen and a dual-core OMAP 4 processor.

ViewSonic includes plenty of connectivity options, such as Micro HDMI, x3 USB ports, MicroSD card reader, RJ45, wifi and Bluetooth. The device also has a built-in 1.2MP front-facing webcam with integrated microphone and SRS Premium Sound speakers.

Will the VSD220 find success in a market filling up with Windows 8 AIO PCs? We will know once it hits the market on October 2012.
