

Panasonic Intros 20-inch 4K Tablet

Written by Marco Attard
16 January 2013

Panasonic shows off a giant tablet at CES 2013 ideal for photographers and other creative customers-- a 20-inch Windows 8 model with an IPS LCD display handling 4K (aka UHD) resolution.

At 3840x2560 resolution with a pixel density of 230ppi the display is only just below the 264ppi "Retina" standard held by the latest iPads. The display handles 10-finger input, as well as more accurate control via digitiser pen.

Tech specs include an Intel Core i5 CPU, 4GB RAM, Nvidia GeForce graphics and 128GB storage. Connectivity features wifi, Bluetooth and a pair of USB slots.

As well as being big in size (475x33x10mm), the yet unnamed tablet weighs 2.4kg and has a battery life of all of 2 hours. As a result Panasonic is marketing it towards vertical market segments, chiefly professional photographers and architects.
