Samsung announces a pair of tablets and a camera as its device ranks grow increasingly huge-- the ATIV Q tablet-notebook hybrid, the ATIV Tab 3 Windows 8 tablet and the Galaxy NX internet-enabled camera.

The more interesting of the lot is the ATIV Q, a "fully convertible device" offering 4 different configuration (laptop, tablet and 2 in-between modes) running on either Windows 7 or Android Jelly Bean (4.2.2).

It features a 13.3-inch 3200x1800 resolution (275ppi) display, an Intel Core i5 processor and 128GB SSD storage, all inside a case weighing 1.29kg and 13.9mm thick.

Samsung claims the battery powers up to 9 hours of usage.
