Chinese Android gaming device maker GamePad Digital (aka GDP) announces the Pocket, a 7-inch Windows 10 notebook, is now shipping following a successful Indiegogo crowdfunding campaign.

First announced back in February 2017, the Pocket represents something of a departure from the portable consoles that are GDP's usual product offering. Described as a combination of ultra-thin notebook and smartphone, the Pocket offers a 7-inch 1920 x 1080 display, Intel Atom X7-Z8750 quad-core CPU, Intel HD Graphics 405 GPU, 8GB LPDDR3 RAM, 128GB eMMC storage and a 7000mAh battery.

Connectivity comes through USB-C, USB 3.0 and micro HDMI ports, as well as 802.11a/b/g/n/ac wifi and Bluetooth 4.1. The magnesium aluminium alloy unibody features a full QWERTY chiclet keybord and trackpoint, while cooling comes through copper heatpipe and active fan. The OS of choice is Windows 10, but the device also supports Ubuntu.

The GDP Pocket is available now.
