

Samsung Reveals Another Phone

Written by Marco Attard

Galaxy Note too big? Galaxy S III Mini too small? Samsung hopes it has all customer preferences covered with yet another smartphone size-- the 5-inch Galaxy Grand.

SAMSUNG TOMORROW

The Grand's TFT LCD touchscreen might be (err) grand in size, but it does not impress-- not 800 x 480 resolution. In comparison both Galaxy S III and Galaxy Note II display resolutions clock at 1280x720.

Mind, this mid-range smartphone does have a few interesting features. Running on Android 4.2 (Jelly Bean), the Galaxy Grand comes with either 1 or 2 SIM-card slots, handles GSM and HSP+ networks and carries a decent 1.2GHz dual-core CPU and 8GB internal storage (expandable to 64GB via microSD card).

Cameras are identical to those in the Galaxy S III and Note II-- 8MP rear-, 2MP front-facing.
