

## Samsung Goes Metal and Glass in Galaxy S6, S6 edge

Written by Marco Attard

---

Samsung shows off a more premium smartphone design approach at Mobile World Congress 2015 with the Galaxy S6 and S6 edge, a pair of flagship devices replacing Samsung's usual plastic with metal and glass frames.

The pair are near-identical to each other, since both are 5.1-inch Android 5.0 handsets with 2560x1440 displays running on octa-core Exynos processors. What differentiates the S6 edge is suggested by the name-- the device has a dual-curved display curving ever-so-slightly from, well, the edges.

This means [earlier rumours](#) were right, even if the slight screen curves do not allow for the additional functionality seen in the Galaxy Note Edge.
