17 December 2015

Customers demanding a smartphone with a longer-lasting battery? Chinese vendor Oukitel might have a solution with the K10000, a device packing a 10000mAh battery.

According to the company the gigantic battery allows for around 10-15 days of use per charge. It also supports reverse charging, turning it into a battery pack of sorts for the charging of other devices.

However one has to keep in mind the K10000 is perhaps not too impressive as far as smartphones go-- it is a 5.5-inch Android device with a 720x1280 resolution display, quad-core 1GHz MediaTek CPU, 8MP rear-/2MP front-facing cameras and 16GB storage (expandable to 32GB via microSD card). Connectivity comes through LTE, GPRS, EDGE GPS, A-GPS, 3G, Bluetooth and wifi.

The K10000 ships from January 2016.
