

Media Guide and Remote on iPhone

Written by Marco Attard
19 January 2011

Dijit is the next iPhone app turning Apple's smartphone into a universal remote-- with support for over 200,000 devices.

Combined with Griffin's Beacon bluetooth-to-infrared bridge device, the app supports any IR device without need for a dongle.

As well as acting as a fully customisable remote control interface, Dijit also works as a user's media guide-- with Netflix support and channel/TV show/genre search. Users can also share what they watch on Facebook and Twitter through the app's Check-In feature.

The Dijit app and Beacon should be both available soon.
