LG presents two premium IPS monitors at IFA 2012-- the 29-inch EA93 "cinematic display" and the professional 27-inch EA83.

The EA93 handles resolutions of up to 2560 x 1080 and has an unusual 21:9 aspect ratio. LG claims it displays 100% defined sRGB colour space while delivering 300nits brightness, making it ideal for both entertainment and professional situations.

A 4-Screen Split feature allows users to divide the display into 4 segments and Dual Link-Up allows the simultaneous connection of 2 devices to the monitor.

Meanwhile the EA83 aims for more professional use, with 2560 x 1440 resolution, 16:9 aspect ratio and 350nits brightness. It has colour capabilities beyond sRGB, being able to display 99% of the Adobe RGB colour space.

The EA83 also ships with software and hardware colour calibrators.
