BenQ announces the next entry to the XL monitor series at the Intel Extreme Masters World Championship-- the XL270T, a "world-class professional gaming monitor" featuring a 27-inch display.

The 120Hz monitor features LED backlighting, 12 million:1 contrast ratio and 1ms response time. Dual HDMI ports handle connectivity.

Further technologies include Display Mode (allows users to switch between 9 monitor sizes), Smart Scaling (scales screen on-the-fly without impacting controller sensitivity) and x2 variations to the FPS Mode preset.

Also ideal as an entertainment display, the XL2720T is Nvidia 3D Vision 2 certified and carries 3D Lightboost technology for up to twice the original screen brightness.
