---

Asus has many products on show at CES 2016, but one display stands to attention-- the MB169C+, a portable 15.6-inch monitor the company says is the first to use a USB-C connection for both power and video transmission.

The monitor weighs just 800g, is 8.5mm thick and features a 1980x1080 resolution IPS panel. The USB-C cable makes it compatible the likes of the Apple MacBook, Google Chromebook Pixel and Samsung Galaxy TabPro S, as well as any future devices featuring the latest USB standard.

As mentioned Asus also has plenty of other offerings on show-- including the Designo MX27UQ 27-inch 4K monitor, the palm-size ZenBeam USB projector, the VivoMini VM65N mini PC, the VivoStick TS10 PC-on-a-stick and the Chromebit CS10 Chrome OS-PC-on-a-stick.
