An innovation shown at CES, The IOGEAR Wireless USB to VGA Adapter kit instantly allows you to add a high resolution display using Wireless USB Technology.

logear's Wireless USB Audio/Video Kit transmits media content stored on a PC hard drive—or pulled from the net—to any display located up to 30 feet away. Connect the Wireless USB Host to your PC, and the audio and VGA adapters to your display; it will transmit stereo sound and video of up to 720p in resolution.
