

Dell announces the S2417DG-- a 24-inch gaming monitor promising "premium visuals fit for a champion" through WQHD (2560 x 1440) resolution and variable refresh rate with Nvidia G-Sync.

Refresh rates range from 30 to 165Hz, while the inclusion of Nvidia G-Sync ensures the elimination of screen tearing, stuttering and ghost images. Grey-to-grey response time is also fast at 1-millisecond, while 3D is supported through Nvidia 3D Vision technology. Constrast ratio stands at 1000:1 with 350cd/m2 brightness, 170/160 viewing angles, 16.7 million colour depth and standard sRGB gamut.

Other game-centric features include various built-in gaming profiles providing "optimal" settings for different kinds of games, such as RPG, FPS and RTS. Connectivity comes through DisplayPort 1.2a and HDMI 1.4 inputs together with x4 USB 3.0 ports.

An untrathin bezel allows for multi-monitor setups, and a tilt/pivot/swivel stand is included.
